

Amendments to the Specification:

Replace paragraphs [0017] and [0020] in their entireties with the paragraphs shown below.

[0017] In one embodiment, the application 102 provides the input command signal 112, wherein the input command signal may be any type of command for a window display, including window sizing, generation, and activation. When text is rendered that originates from an application to be magnified 102, the display driver 108 notifies 114 the message hook application 104 that an enlarged font is required. The message hook application 104 further generates a text call 116 to the character generator 106 and a text call ~~modifier~~ notifier 118 to the display driver 108. The character generator 106 receives a character display command including a magnification factor 120 from the message hook application 104. In response to the text call 116, the character generator generates a magnified character set which includes a plurality of character enlarged by the magnification factor 120.

[0020] Thereupon, in one embodiment of the present invention, the character generator 106 provides the enlarged character set 122 to be stored in the cache 110 associated with the display driver 108. Furthermore, the character generator 106 may provide a display command 124 to a display driver 108 such that the display driver may provide a visual output.
